WORK EXPERIENCE

Oscar Health Insurance

Operations Analyst (Level 3), Process Design and Tech Strategy

New York City, NY

August 2021 - Present

- I take a workflow, break it down into its constituent parts, analyze how to improve it, and either personally automate the parts that can be automated, or project manage the engineering team in the development of the new automation, and train processors on any remaining manual parts, and create end-to-end documentation.
- Responsible for designing, automating, and implementations of new workflows for adjudicating health insurance claims, as well as training insurance claims processors in new workflows.
- In response to Medicare audits, found source of mis-adjudicated claims in tech stack, fixed automations, and retrained processors in correct workflow.
- Automated analyses resulting in freeing up ≈ 6 person team for other analysis.
- Hand picked for SWAT team working on company wide claims adjudication issues.
- Identified \$3.8 Million dollars in overpayments and $\sim 120,000$ claims paid out incorrectly from misconfigured automations and implemented fixes to allow for recoupment.

MTA, Transit Adjudication Bureau

Data/System Analyst (Consultant)

New York City, NY

November 2020 - August 2021

- Project Manager charged with overseeing all coordination with MTA IT for all updates to internal systems. Responsibilities included setting acceptance criteria, performing QA UAT testing, triaging work based on available resources, and performing user trainings on the updated software.
- Coordinated all communication and projects with MTA IT for the Transit Adjudication Bureau. Supplied first level solutions where possible, documented, and provided escalation for serious issues.
- Business Analyst for workflow improvement/proprietary software improvements. Responsible for creating documentation and writing up system improvements.
- Conducted QA tests and approval for software improvements before introduction to production environment.
- Designed, built, and produced weekly, monthly, and annual reports using SQL and Microsoft PowerBI.
- Interfaced with data analysts outside the MTA such as the NYPD for data verification.

Alternative Transportation Systems, LLC.

Business Analyst

Boston, MA

June 2019 - November 2020

- Built business automation processes including payroll, employee recertification and testing, and report generation. Worked on modularizing and modernizing a system of scripts into a source controlled, and maintained system using Python, ODBC, SQL, JavaScript, and Google Apps Script.
- Designed and deployed an app using Google Apps Script and AppSheet which is used by over 50 employees daily. Automated vehicle maintenance reports and analysis of over 1,600 data points per day, resulting in faster data flow, expediting preventative maintenance actions by up to a month.
- Created and deployed a full-stack ecosystem linking a SQL database to Google Suite using R in a FIPPs and HIPAA compliant manner. This system displays live geographic information and driver shifts used to manage 50+ routes at once.
- Wrote an aggregation script used by the Billing Department to generate invoices for billing records, replacing the manual billing method. Continuously iterated changes with updated business needs.
- Designed and built a live profitability tracker used by c-suite management to measure operational efficiency, income, and profit margins using SQL, Google Apps Script, Google Maps API, and Google Sheets.
- Generated all KPI's such as On-Time Performance, trips per hour, etc. as needed by management, including demand sensing, capacity measurements and predictive modeling.
- Presided over IT provisioning, technical support, and training for over 60 users.
- Oversaw contractual rate negotiations, work acceptance or rejection, and operations for a \$90,000/month contract.

SKILLS

Programming Languages: Python, R, JavaScript, Google Apps Script, SQL, BigQuery
Processes: Documentation, UAT, Data Analytics, REST API, Troubleshooting, Automation

AWARDS

Oscar Hackathon Q3 2022

August 2022

Won first place in Operations Excellence for React App using Regex to identify types of medical codes.
